

ENTEK Material Specifications for SCREW SEGMENTS

For Sizes	Material Code	Surface Treatment	Surface Hardness	Specifications	Common Applications
All	15H	Through-hardened	58 - 60 HRc	D2 tool steel	Low corrosion applications with more wear resistance than N135. Through hardened so wear does not accelerate toward end of life.
All	16H	Through-hardened	46 - 49 HRc	H13	Used in high impact zones, feed screws (CoFs), and mixing elements (CoMs). Through hardened so wear does not accelerate toward end of life.
27mm - 43mm	41H	Through-hardened	60 - 62 HRc	Solid PM All	High wear, non- corrosive applications such as highly filled color compounding. Solid 41H = 27mm - 43mm. Bi-Metallic 61H = 53mm and up.
53mm and up	61H	PM - HIP, bimetallic	60 - 62 HRc	Mild steel core (typ.1018), PM exterior	
27mm - 43mm	46H	Through-hardened	56 - 59 HRc	Solid PM	High wear, high corrosion applications such as organic fiber, aggressive volatiles, solvents/acids, in conjunction with abrasive components. Solid 46H = 27mm - 43mm. Bi-Metallic 67H = 53mm and up.
53mm and up	67H	PM - HIP, bimetallic	56 - 59 HRc	Mild steel core (typ. 1018), PM exterior	

10B, 15H, 41H, 46H
Solid Elements

61H and 67H
Bi-Metallic Elements

Screw Material Wear Chart

Warning! Solid PM material (no soft core) can be prone to cracking in high impact conditions.

*Please note: We have provided a range of the most economic, medium and high end grade products which are standard stock materials by ENTEK. Other materials are available upon request (not stocked). Nickel-based options exist for very high corrosion resistance requirements (not stocked).

ENTEK Material Specifications for BARREL SEGMENTS

For Sizes	Material Code	Surface Treatment	Surface Hardness	Specifications	Common Applications
All	10B	Nitrided	61 - 63 HRc	Non-sleeved, N135	Low wear, low corrosion applications such as color compounding, or where high toughness is required; feed barrels on 43mm, 73mm, and 103mm.
All	73B	Cast material - Nitrided	52 - 58 HRc	Sleeved	Medium wear, medium corrosion applications providing more wear and corrosion resistance than 10B.
27mm - 40mm	41H	Through-hardened	60 - 62 HRc	Sleeved	High wear, high corrosion applications such as abrasive mineral fill, silica, fiberglass, organic fiber and /or chemical solvents, acids. Solid 41H, 46H = 27mm - 40mm. Bi-Metallic 61H, 64H, 80H = 43mm and up.
27mm - 40mm	46H	Through-hardened	56 - 59 HRc	Sleeved	
43mm and up	64H	PM - HIP	61 - 63 HRc	Sleeved	
43mm and up	61H	PM - HIP	60 - 62 HRc	Sleeved
